Vineyard™ clay roofing: unrivalled design flexibility and performance

Vineyard roofs use half as many tiles and less timber compared to conventional tiled roofs. The unique configuration of natural clay tiles fixed on Nutec asbestos-free roof sheeting gives Vineyard roofing superior thermal insulation performance. It's also more resistant to dust, wind and rain.

You can create your own colour mix from the largest range of imported clay roof tiles in South Africa. And you enjoy the design flexibility of a system that can be installed at any pitch from 10 degrees to 20 degrees.
